

## LPG endermologie treatment at Harrods Wellness Clinic

I was recently invited to try a non-invasive cellulite-reducing treatment, endermologie, patented by French company LPG. Although formerly sceptical any machine based treatment that aims to tackle cellulite, I was drawn to LPG's invitation as their technology works 100% naturally.

endermologie is completely non-aggressive, anti-ageing, and works to contour, firm and tighten skin complexion where cellulite is present. With warmer weather arriving- meaning leg weather- I headed to the new Harrods Wellness Clinic to trial the technology for myself.

LPG have recently revised their endermologie contouring techniques to create CELLU M6® Alliance, a solution that has been improved to maximise results. The new redesigned treatment head works to:

- ◆ Reactivate the endogenous synthesis of collagen, elastin and hyaluronic acid
- ◆ Stimulate natural lipolysis
- ◆ Drain fluids
- ◆ Accelerate vascularisation
